Inject new energy into your manual lift

Otis 100M is our latest, power-packed modernisation solution that's designed to breathe new life into older manual lifts. Tailor-made for buildings with up to 14 stops, it can be fitted with minimal disruption and downtime.

NOT FOR CONTENT _ ONLY STRUCTURES

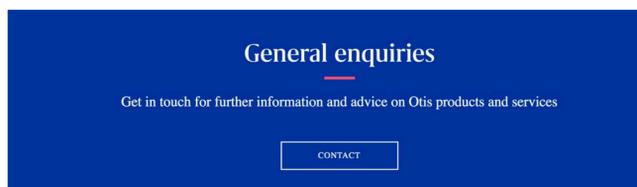

Put these elements into this structure

A smooth operator

Experience a serious performance upgrade

The combination of a sleek new microprocessor based controller, Variable Voltage Variable Frequency technology, new copper wiring, door open alert and an automatic fan cut out facility deliver smooth operation and the details that matter. It's all about bringing your system's performance and features right up to date without major upheaval.

DO not include components in the 2.0 or this background image
