Out With The Old
In With The New

An elevator is the lifeline of any multi-storey building. However, as it advances in age, operational reliability, fading looks, the need for optimum efficiency and safety become a major concern in every user's mind.

WHEN DO YOU MODERNIZE YOUR ELEVATOR

- Ageing elevator
- The elevator's performance needs improvement
- Frequent breakdowns
- Longer passenger waiting time due to increase in traffic flow
- The overall aesthetics of the elevator needs a facelift
- Your building's prestige has waned

You now have the answer in Otis 200M which offers an exclusive modernization solution for upgrading old tow speed elevators having automatic doors.

PERFORMANCE UPGRADE

- New Microprocessor based controller
- Variable Voltage Variable Frequency drive :

SMOOTH ELEVATOR OPERATION CONTROL

The pulse width modulation (PWM) is the heart of the VVVF control. It makes possible the control of alternative current and the supply frequency to the AC motor simultaneously. This ensures that the elevator closely follows the set speed pattern. The PWM and closed loop system guarantees smooth control during acceleration / deceleration and optimum travel time, regardless of passenger load variations.

- Close loop operation for better leveling.
- New copper wiring
- Auto fan cut-off facility

SAFETY UPGRADE

- Battery operated alarm bell
- Battery operated emergency light

AESTHETIC UPGRADE

- Illuminated call buttons
- Digital position indicators

BENEFITS

- Appreciable power saving over existing system
- Leveling accuracy
- Improved ride comfort
- Optimized traffic handling
- Wait time reduction
