

Modern appearance Innovative ease of use

FEATURES

- Convenient touchscreen operation
- 10" color display
- Customizable user interface
- Futuristic design for your building
- No "jungle of signs" in front of the elevator
- Destination already selected in the car
- Plug & play

Innovation

e*touch replaces the traditional hall call button with a simple panel whose content and layout can always be quickly and straightforwardly adapted to new circumstances by the user itself. This lets the modern "tablet culture" move into the lobbies of residential and commercial buildings.

Inspiration

e*touch was developed from a user perspective and fascinates with an intuitive ease of use. The destination is selected easily by touching the tablet, it is no longer necessary to select the floor in the elevator car itself.

Individuality

e*touch inspires with a futuristic design and timeless elegance. The housing is made of anodized aluminum, which has a very elegant appearance on the one hand and provides reliable protection against corrosion on the other.
