

Lift Landing Barrier

ND000101

PROTECTING PASSENGERS AND PROFESSIONALS

To maintain our industry-leading levels of safety for passengers and service professionals alike, we recommend the tough, flexible, highly visible Lift Landing Barrier.

MAXIMUM PASSENGER SAFETY

Provides a clear, fail-safe barrier for passengers when a lift shaft is open for inspection or maintenance.

A SAFE PLACE TO WORK

Maintenance engineers and lift inspectors can access the lift shaft to work, safe in the knowledge that the area is secured.

HOW IT WORKS

A model of robust, simple functionality, the Lift Landing Barrier extends across the gap left when landing doors are open, providing a clear signal for building users and removing the risk of falling.

LIABILITY PROTECTION

In addition to acting as a physical safety precaution, the barrier can help to protect your organisation against potential liability claims.

INDUSTRY STANDARD

When it comes to the vital codes and regulations, the Lift Landing Barrier complies with BS 7255, the standard for safe working on lifts.
